Claims 46-97 are pending in this application.

#### **DETAILED ACTION**

### Claim Objections

1. Claims 47-97 objected to because of the following informalities:

The claims are dependent on cancelled claims (1-45). Appropriate correction is required.

### Examiner position

The examiner makes of record that instant claim 90 recites a broad range followed by a series of narrow ranges. For examination purposes, the examiner asserts that the narrow ranges recited in the instant claim 90 merely exemplary ranges, and thus, the prior art will be applied against the broadest range recited in the instant claim 90. Further, the examiner suggests that applicant should delete the narrow ranges from the instant claim 90 and add new dependent claims that recite the narrow ranges recited in the instant claim 90.

# Claim Rejections - 35 USC § 103

- The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 46-53, 55-56, 67-71, 78-79 and 82-95 are rejected under 35 U.S.C. 103(a) as being unpatentable over Laurent et al. (US 2002/0046431 A1) in view of Lim et al. (US 6,461,391 B1).

Art Unit: 1751

Laurent et al. (US' 431 A1) teaches a hair dyeing composition comprising oxidation bases such as para-phenylenediamine compounds represented by a formula (1), in which R1 and R2 form together with the nitrogen to which they attached a 5- or 6-membered nitrogencontaining heterocyclic ring (see page. 10, formula (1) and page 12, paragraph, 0270) and wherein the composition further comprises opacifiers as claimed in claim 46 (see page 21, paragraph, 0466), additional cationic polymers as claimed in claim 82 (see page 7, paragraph, 0192), thickeners and surfactants as claimed in claims 83-84 (see page 21, paragraph, 0466), other oxidation bases such as para-aminophenol as claimed in claim 85 (see page 12, formula (III)), wherein the oxidation bases are presented in the amount of 0.0005% to 12% which is within the claimed range as claimed in claim 86 and overlapped with the claimed range as claimed in claim 87 (see page 13, paragraph, 0312), couplers such as 1,3-dihydroxybenzene (meta-diphenol) in the amount of 0.005 to 5% as claimed in claims 88-91 (see page 13, paragraph, 0314), direct dyes as claimed in claim 92 (see page 13, paragraph, 0317), hydroxylated solvents such as ethanol as claimed in claim 93 (see page 10, paragraph, 0254), oxidizing agents such as hydrogen peroxide as claimed in claims 94-95 (see page 21, paragraph, 0469).

The claims differ from the reference by reciting cationic tertiary para-phenylenediamine compounds as oxidation bases.

Lim et al. (US' 391 B1) in analogous art of hair dyeing formulation, teaches a composition comprising oxidation base of cationic tertiary para-phenylenediamine having a formula (1), which is similar to the claimed formula (1), when in the reference formula (1), R, R1 and R2 are alkyl radicals, R4 is hydrogen atom or an alkyl radical and R5 is a hydrogen atom

Art Unit: 1751

(see col. 2, lines 44-50) and when in the claimed formula (1), R2 represents the onion radical Z of the claimed formula (II), R3 is a hydrogen atom, n is 1 or 0 and R1 is an alkyl radical. The cationic tertiary para-phenylenediamine is represented in the amount of 0.01 to about 5.0%, which is within the claimed range as claimed in claims 78-88 (see col. 3, lines 43-46). Lim et al. further, teaches the compounds 1-(4-aminophenyl)-N,N-dimethyl-N-pentylpyrolidin-3-ammonium iodide and 1-(4-aminophenyl)-N-(2-hydroxyethyl)-N,N-dimethylpyrrolidin-3-ammonium iodide which are structurally similar to the claimed compounds as claimed in claims 67-71 (see col. 19, Example 22 (compound 7) and col. 26, Example 29 (compound 14).

Therefore, in view of the teaching of the secondary reference, one having ordinary skill in the art at the time the invention was made would be motivated to formulate such a dyeing composition by substituting the heterocyclic para-phenylenediamine oxidation base of Laurent et al. by the cationic tertiary para-phenylenediaines as taught by Lim et al., with a reasonable expectation of success. Such a modification would be obvious because Laurent et al. as a primary reference discloses the genus of para-phenylenediamine compounds as oxidation bases. Lim et al. as a secondary reference clearly teaches that the quaternized pyrrolidine compounds are suitable primary intermediates for hair coloring compositions for providing good oxidative coloration of hair such as light fastness, fastness to shampooing, fastness to permanent wave treatment and suitable for providing a wide variety of different color shades with various primary intermediate and coupler compounds (see col. 2, lines 13-20) and, thus, a person of the ordinary skill in the art would be motivated to substitute para-phenylenediamine oxidation bases of Laurent et al. by the cationic tertiary para-phenylenediaines of Lim et al., for providing good

Art Unit: 1751

oxidation coloring of hair and would expect such a composition to have similar properties to those claimed, absent unexpected results.

4 Claims 72-77, 80-81 and 96-97 are rejected under 35 U.S.C. 103(a) as being unpatentable over Laurent et al. (US 2002/0046431 A1) and Lim et al. (US 6,461,391 B1) and further, in view of Murakami (US 2003/0145395 A1).

The disclosures of Laurent et al. (US' 431 A1) and Lim et al. (US' 391 B1), as described above do not teach or disclose the specific species of the opacifying compounds as claimed.

However, Laurent et al. (US' 431 A1) teaches a dyeing composition comprising opacifiers (see page 21, paragraph, 0466).

Murakami (US' 395 A1) in analogous art of hair dyeing formulation, teaches a composition comprising opacifying agent titanium oxide or it may be a material partially containing titanium dioxide such as titanium dioxide-covered mica (silica) as claimed in claims 72-74, and having particles for the average particle diameter to be 0.01μm (10 nm) to 1 μm (1000 nm) which covered the claimed ranges as claimed in claims 75-77 (see page 5, paragraph, 0076), and wherein the titanium oxide is presented in the percentage amount of 0.3 to 1 wt % which is overlapped with the claimed ranges as claimed in claims 80-81 (see page 5, paragraph, 0078).

Therefore, in view of the teaching of the secondary reference, one having ordinary skill in the art at the time the invention was made would be motivated to formulate such a dyeing composition by incorporating titanium oxide as an opacifying agent in the composition of Laurent et al., with a reasonable expectation of success. Such a modification would be obvious because Laurent et al. as a primary reference suggests the use of opacifiers (opacifying agents) in

Art Unit: 1751

the dyeing composition. Murakami as a secondary reference clearly teaches that the titanium oxide (opacifying agent) is used in the dyeing composition for improving the performance of the dyeing composition so the composition will have the appearance and make it acceptable as a hairdressing product to consumers (see page 5, paragraph 0075), and, thus, a person of the ordinary skill in the art would be motivated to incorporate titanium oxide as taught by Murakami. in the composition of Laurent et al., for improving the performance of the dyeing composition and would expect such a composition to have similar properties to those claimed, absent unexpected results.

With respect to claims 96-97, it would have been obvious to one having ordinary skill in the art at the time the invention was made to formulate and to apply to the hair a dyeing composition comprising oxidation bases of cationic tertiary para-phenylenediamines, opacyifying agent of titanium oxide and oxidizing agents and to further hold this composition in the multi-compartment device as claimed because Laurent et al. in combination of Lim et al. and Murakami teaches a similar process for dyeing hair comprising applying to the hair the dyeing composition as described above and wherein the process is similar to those as claimed in claim 96 (see page 22, paragraph, 0477). Laurent et al. further, teaches multi-compartment devices for dyeing hair, which are similar to those, claimed in claim 97 (see page 27, claim 66), and, thus, a person of the ordinary skill in the art would be motivated to apply to the hair the dying composition as described above and to provide a device for holding and maintaining the dyeing composition, and, would expect such a process to have similar effect and similar properties to those claimed, absent unexpected results.

Art Unit: 1751

## Allowable Subject Matter

Claims 54 and 57-66 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The prior art of record do not teach or disclose cationic paraphenylenedimanie compounds of the claimed formula (II), in which x is equal 1. the prior art of record also do not teach or disclose para-phenylenedimanie compounds of the claimed formulae (III) and (IV).

#### Conclusion

The references listed on from 1449 have been reviewed by the examiner and are considered to be cumulative to or less material than the prior art references relied upon in the rejection above.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eisa B Elhilo whose telephone number is (571) 272-1315. The examiner can normally be reached on M - F (8:00 -5:30) with alternate Friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Yogendra Gupta can be reached on (571) 272-1316. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
